MCFarlane I.D., Hudman D., Nothacker H.-P., Grimmelikhuijzen C.J.P.;
"The expansion behaviour of sea anemones may be coordinated by two
inhibitory neuropeptides, Antho-KAamide and Antho-Riamide.";
Proc. R. Soc. Lond., B, Biol. Sci. 253:188-188(1993).
-!- FUNCTION: Inhibits spontaneous contractions in several muscle
groups. May be involved in the expansion phase of feeding
behaviour in sea anemones.
-!- SUBCELLUIAR LOCATION: Secreted.
                                                                                                                                                              Nothacker H.-P., Rinehart K.L. Jr., Grimmelikhuijzen C.J.P.; "Isolation of L.3-phenyllactyl-he-Lys-Ala-NH2 (Antho-KAamide), novel neuropeptide from sea anemones."; Biochem. Biophys. Res. Commun. 179:1205-1211(1991).
          Anthopleura elegantissima (Sea anemone).

-!- FUNCTION: EXPLIBITS UNUSUAL SHARK REPELLENT AND SURFACTANT PROPERTIES. FORMS VOLTAGE-DEPRNDENT, ION-PERMEABLE CHANNELS IN MEMBRANES. AT HIGH CONCENTRATION CAUSES CELL MEMBRANE LYSIS.
-!- SUBUNIT: MONOMER. IN AQUEDUS SOLUTION EXISTS AS A TETRAMER.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE PARROXIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Actinopterygii; Neopterygii; Teleostei; Euteleostei; Neoteleostei; Acanthomorpha; Acanthopterygii; Percomorpha; Pleuronectiformes; Soleoidei; Soleidae; Pardachirus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hypotrehalosemic activity isolated from the corpora cardiaca of horse flies (Diptera).";

Proc. Natl. Acad. Sci. U.S.A. 86:8161-8164(1989).

-1- FUNCTION: THIS HORNONE, RELEASED FROM CELLS IN THE CORPORA CARDIACA AFTER THE BEGINNING OF FLIGHT, CAUSES RELEASE OF DIGLYCRIDES FROM THE FAT BODY AND THEN STIMULATES THE FLIGHT MUSCLES TO USE THESE DIGLYCRIDES AS AN ENERGY SOURCE.

-1- SIMILARITY: BELONGS TO THE AKH / HRTH / RPCH FAMILY.

A; Experimental source: Chainia sp. strain NCL 82.5.1
A; Note: the source is designated as Chainia sp.
C; Function:
A; Description: endohydrolyzation of beta-1,4-xylosidic linkages in xylans
A; Pathway: fermentation of hemicellulose into ethanol
C; Keywords: glycosidase; hydrolase
                                                                                                                                                                                                                                              Gaps

Screening, diagnosis or prognosis of vascular dementia (VD), useful for determining stage of VD and monitoring the effect of VD therapy, comprises analysing body fluid by 2-dimensional electrophoresis for

```
described are decreased in the cerebrospinal fluid (CSF) of BAD (bipolar affective disorder) subjects, whilst other DPIs (AND2887) are increased in BAD subjects. Also described are peptide sequences identified from DPI-45 and DPI-213 and the nucleic acid sequence they are encoded by. The sequences of the invention are useful for clinical screening, disquosis, prognosis, therapy and prophylaxis of neuropsychiatric disorders e.g. BAD (also known as bipolar mood disorder. BP), maniac-depressive illnesses, attention deficit disorders, schizoaffective disorders, and unipolar affective disorders. The present sequence represents one of the DPI tryptic digest peptides of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WO200162785-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                               The invention relates to screening, diagnosis or prognosis of Vascular Dementia (VD) in a subject comprising analysing body fluid from the subject by 2-dimensional (2-D) electrophoresis to generate a 2-D array of features containing at least one chosen feature whose relative abundance correlates with the presence, absence, stage or severity of VD or predicts the onset or course of VD, especially detecting in a sample of cerebrospinal fluid (CSF) from the subject one of 223 VD-associated protein isoforms (VPIS) (ABB55801-ABB56285) as fully defined in the specification. Detecting VD-associated features and VPI is useful for the screening, diagnosis or prognosis of VD, for determining the stage or monitoring the effect of therapy administered to a subject having VD. Nucleic acids encoding a VPI or inhibiting the function of a VPI are useful for the treatment of VD and for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acid encoding a protein associated with bipolar affective disorder, which is used for diagnosis, prophylaxis and therapy of neuropsychiatric disorders, such as bipolar affective disorder -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; depression associated protein isoform; tryptic digest peptide; DPI; cerebrosphan [luid; CSF; BAD; bipolar affective disorder; neuropsychiatric disorder; bipolar mood disorder; neuroleptic; maniac-depressive illness; schizoaffective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               associated protein isoforms (DPIs), particularly the tryptic digest peptides, of these proteins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence represents a schizophrenia-associated protein isoform (SPI). These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebrospinal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a nucleic acid probe to detect the presence of nucleic acids or SPIs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New schizophrenia associated protein isoforms and encoding nucleic acid molecules, useful for treatment, diagnosis and prognosis of schizophrenia and screening for potential drugs for treatment and new

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Affected Disorder (BAD)-Associated Protein Isoform (DPIS). The DPI's are used to screen, diagnose or prognose of BAD or unipolar depression, diagnose or prognose of BAD or unipolar depression, determine the stage or severity of BAD or unipolar depression, identify a subject at risk of developing BAD or unipolar depression, or monitor the effect of therapy in a subject. They are also used to screen for or identify agents that interact with a DPI. These agents, antibodies against the DPIs, and nucleic acids encoding the DPIs are used to treat or prevent BAD or unipolar depression. Diseases that can be treated are attention deficient disorder. A schizoaffective disorder, a bipolar or a unipolar affective disorder. The DPIs are used in proteomics. The proteomic approach of using DPIs for screening, diagnosis or prognosis of BAD or unipolar depression overcomes the problems of using gene

The invention relates to methods and compositions for screening, diagnosis and prognosis of Schizophrenia. The method involves detecting the presence of Schizophrenia (SCH) Associated Features (SFS) and SCH Associated Protein Isoforms (SPIS) in samples, e.g. by electrophoresis, immunoassay or hybridisation assay, for diagnosing and monitoring SCH, studying the effectiveness of treatments and for identifying potential therapeutic agents. The method is used for all screening or diagnosis of SCH and the relative abundance of at least 1 chosen feature correlates with the presence or absence of SCH; and (2) monitoring the effect of therapy administered to a subject with SCH and the relative abundance of at least 1 chosen feature which correlates with the severity of SCH.

The expression and activity of the SFs, SPIS and related molecules (e.g. secondary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as targets to identify and produce potential therapeutic agents for the treatment of SCH. The paucity of detectable neuralgic defects the creatment of SCH. The paucity of detectable neuralgic defects the contact of a subject of an analysis of a secondary messengers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorders, where manifestations of anatomical and biochemical changes have been identified in many cases. Consequently the identification and characterisation of cellular and/or molecular causative defects and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diagnosing and monitoring Schizophrenia by detecting the presence of Schizophrenia Associated Features and Schizophrenia Associated Protein Isoforms in samples of cerebrospinal fluid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neuropathies are necessary for improved treatment of neuropsychiatric disorders. AAU15114-AAU15762 represent the amino acid sequences of schizophrenia-associated isoforms used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to a recombinant polypeptide having interleukin-1 inhibitor (IL-1i) activity against IL-lalpha, IL-lbeta or both. The IL-li is useful for preparing pharmaceutical composition for treating an IL-l mediated pathophysicological condition which includes arthritis, rheumatoid arthritis, Crohn's disease, ulcerative colitis, osteoporosis, juvenile diabetee, psoriasis, lupus erythematosus, fibrosis, glomerulonephritis, gout, acute febrile illness, sarcoidosis, lymphomas, a patient after damage to the brain from vascular occlusion, or acute or chronic interstitial lung disease. The present sequence is a peptide based on an IL-li of the invention, used to design degenerate probes for isolating nucleic acids encoding IL-li molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Scaffold protein; beta strand; beta sheet; stabilize antigen; vaccine; tumour; chemotherapeutic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                         Sequences AAV40727-Y40748 are functionally equivalent derivatives of the S4 peptide (AAY40607) which forms part of a beta sheet. Peptides contains at least logether forms part of a beta sheet. Peptides and contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 1 disulfide bond, contains less than 10% alpha helix contains at least 1 disulfide bond, contains less than 10% alpha helix and contains at least 1 disulfide bond, contains less than 10% alpha helix contains slasses. Size, and may also include beta strands Al-A3, or any functionally equivalent derivative of these sequences. The beta strands of connected to the next by hydrogen bonds, which generate a beta sandwich architecture. The next by hydrogen bonds, which generate a beta sandwich architecture. The next by hydrogen bonds, which generate a beta sandwich architecture. The scaffold is constructed of two beta sheets, with the structures confected to chen via amino acid loops, where at least one of the loops binds to a receptor or antigen. The scaffold protein is used to stabilize antigens or whole proteins such as receptors, or their fragments. It may be used to bind two separate molecules. For example, one surface of the scaffold contarget the complex to tumour cells. Another surface may be bound to a protein which binds to a tumour antigen. This will the target the complex to tumour cells. Another surface may be bound to a cytotoxic molecule or an autoimmune antibody which may then kill the chemotherapeutic agents to specific cells. It may be used to chemotherapeutic agents to specific cells. It may be used to catalize individual peptides in a peptide library and may be used in catalize individual peptides in a peptide library and be used in the stabilize individual peptides in a peptide library and be used in the stabilize in a peptide library and be used in the stabilize in a peptide library and be used in the stabilize in a peptide library and be used in the stabilize in a peptide library and be used in the stab
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó

based upon the human CTLA-4 SCA domain. These scaffold proteins can be used as a scaffold to bind antigen- or receptor-binding fragments. These can be used in the treatment of diseases such as cancer, atherosclerosis, thrombosis, osteoporosis, rheumatoid arthritis and diabetic retinopathy. Sequences AAB29930-B29939 were used in the production of the proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vascular endothelial growth factor; VEGF; VEGF-D; malignant melanoma; tumour; psoriasis; angiogenesis; lymphangiogenesis; skin graft; wound healing; lymphedema; scleroderma; anhydrotic ectodermal dysplasia.
                                                                                                                                                                                                                                                                                                                                                  architecture carrying new and randomized peptide sequences useful as supporting framework and carrying antigen or receptor binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A human cell line stably expressing vascular endothelial growth factor D, useful for treating melanomas or tumours expressing {\tt VEGF-D}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present invention is concerned with producing scaffold proteins
                                                                                                                                                                                                                                                                                                                          Scaffold composed of single-chain polypeptide having beta sandwich
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human vascular endothelial growth factor (VEGF)-D derived peptide.

                                                                                                                                                                                                                                            g
                             The present sequence is derived from vascular endothelial growth factor (VEGF)-D. The specification describes a human cell line which stably expresses VEGF-D, or fragments/analogues having VEGF-D biological activity. VEGF-D antagonists, e.g. antisense nucleic acids or triplex DNA, VEGF-D variants or antibodies (especially chimeric antibodies), are useful for the treatment or alleviation of malignant melanomas, tumours or psoriasis. Angiogenesis and lymphangiogenesis stimulating amounts of VEGF-D can be administered to enhance the acceptance and/or healing of skin grafts or to stimulate the healing of stimulating amounts of VEGF-D can be used to treat lymphedems. Stimulating amounts of VEGF-D can be used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are used to stimulate at least one VEGF-D bioactivity chosen from endothelial cell proliferation, migration, survival and differentiation and lymphanglogenesis without inducing vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAW97452-571 represent antigenic sites derived from the haemagglutinin-neuraminidase (HN) protein of the paramyxoviridae. The specification describes 3-D models identifying a proteinaceous substance comprising at least one virus epitope derived from the attachment protein, which corresponds to an antigenic site present on one of the loops of HN. The antigenic sites can be used to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     virus epitope; attachment protein; vaccine; immunodominant epitope.

ractor (veep.)-to. The specification describes a number of the stably expresses VEGF-D, antagonists, e.g. antisense having VEGF-D biological activity. VEGF-D antagonists, e.g. antisense nucleic acids or triplex DNA, VEGF-D variants or antibodies (especially chimeric antibodies), are useful for the treatment or alleviation of malignant melanomas, tumours or psoriasis. Angiogenesis and lymphangiogenesis stimulating amounts of VEGF-D can be administered to enhance the acceptance and/or healing of skin grafts or to stimulate the healing of skin grafts or to stimulate the healing of a surgical or traumatic wound to the skin. Lymphangiogenesis stimulating amounts of VEGF-D can be used to treat lymphadema.

The used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are used to treat sling tumours expressing VEGF-D antibodies are used to treat anhydrotic ectodermal dysplasia. VEGF-D antibodies are used to treat the tumous expressing VEGF-D intibodies are used to stimulate at least one VEGF-D bioactivity chosen from endothelial cell proliferation, migration, survival and differentiation allymphangiogenesis without inducing vascular permeability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vascular endothelial growth factor; VEGF; VEGF-D; malignant melanoma; tumour; psoriasis; angiogenesis; lymphangiogenesis; skin graft; wound healing; lymphedema; scleroderma; anhydrotic ectodermal dysplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A human cell line stably expressing vascular endothelial growth factor D, useful for treating melanomas or tumours expressing VEGF-D
                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human vascular endothelial growth factor (VEGF).D derived peptide.

```
which X is H or an amino-protecting group, Y is OH or a carboxy-protecting group, and W is a peptide containing all or part of the sequence as given in AAW00401, AAW00402, AAW00403 or AAW00404, where any free mercapto groups in the sequence are optionally protected. The present sequence is a specifically preferred partial sequence of AAW00403 and is itself claimed as a new chemical entity. The IL-6 antagonists are useful for treating autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Interleukin 6 antagonist - useful for treating auto:immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New IL-6 antagonists are provided which are of formula X-W-Y, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fructan exohydrolase; FEH; transgenic plant; recombination; transgene; gene expression; detergent; detergen additive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 21; DB 17; Length 5; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAW20068-75 are small peptides derived from hexose oxidase (HO), of the marine algae species Chondrus crispus. Hexose oxidase and peptides having HO activity are useful in the production of food products, e.g. dairy products, starch-containing food products (dough) and non-dairy beverages. HO and active peptide fragments have antimicrobial and antioxidant properties and act by removing all the oxygen in a food packaging. HO and peptides of HO can also be used in an animal feed, especially silage. Further uses are to reduce, or analyse, the sugar content in a food, in the production of cosmetics, tooth care products or a pharmaceutical product and in lactone production. HO can be recombinantly produced in industrially appropriate quantities, and at a quality and purity level which renders polypeptide suitable for industrial purposes.

                                                                                                                                    Transgenic plants such as Cichorium intybus, Cynara scolymus, Helianthus tuberosus, Scorzonera hispanica, Oryza sativa, Zea mays, Friticum aestivum, Triticum durum, Hordeum vulgare, Secale cereale, Avena sativa, Sorghum vulgare, Phleum pratense, Lolium temulentum, Dactylis glomerata, Pennisetum americanum, Allium cepa, Agave americanum, Agava azul teqilana, Sorghum bicolor and Panicum milaceum, transformed with a vector encoding a fructan exohydrolase (FBH) enzyme are useful for the recombinant production of FEH or other polypeptides having FEH activity. The FEH polypeptides produced are useful in detergents or as a detergent additive and in oral care compositions. This internal conserved peptide sequence of fructosyl transferase and invertase was used to create a degenerate antisense primer for amplifying the FEH coding sequence.

The invention relates to a recombinant polypeptide that specifically binds polyclonal antibodies (Abs) generated against a 12 consecutive amino acid segment of interleukin (IL)-1 delta or IL-1 epsilon. Agonists or antagonists of these IL polypeptides are used to regulate a cell involved in an inflammatory response. The IL-1 delta or IL-1 epsilon polypeptides and peptides are used to produce Abs and antigen-Ab complexes. The polypeptides, Abs and the corresponding nucleic acids regulate development and/or the immune system, and can be used to diagnose and treat conditions associated with abnormal expression of IL. Agonists or antagonists of IL-1 delta or IL-1 epsilon polypeptides are
The present peptide is a specific example of new interleukin-6 antagonists of the general formula X-A-B-D-Y, where X is 1-10 amino acids or an amino group protecting group; Y is 1-5 amino acids, a carboxyl group protecting group or an amide; A is preferably Arghaving an opt. protected quanidino group but can be any amino acid; D is Arg having an opt. protected quanidino group and B is preferably a Leu residue but can be any amino acid; including non-natural amino acids, opt. having a protected side-chain. The peptides are useful for treating autoimmune diseases (e.g. systemic lupus erythematosus or chronic rheumatism), renal, skin and intestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interleukin; IL-1 delta; polyclonal antibody; IL-1 epsilon; cytokine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel human genes (see AAZ00410-200477) and the secreted proteins (see AAY25711-Y25778) and fragments (see AAX25779-Y25907) they encode. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological
used with agonists or antagonists of IL-1 alpha, IL-1RA, IL-1 beta, IL-1 gamma, IL-2 and/or IL-12. The IL-1 delta or IL-1 epsilon polypeptides may be used as a soluble polypeptide or as a fusion protein with another cytokine or chemokine. Sequences AAW86287 to AAW86300 represent peptide fragments of a rodent interleukin (IL)-1 delta polypeptide.

conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new Polyncleotides. Specific uses are described for each of the 67 polynucleotides of the invention, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and fetal deficiencies, blood disorders, leukemias, diseases of the immune system, autoimmune diseases, hepatic and renal disease, inflammation, allergies, ischaemic shock, Alzheimer's disorders, wound healing, stroke, arthritis, obesity, asthma, sepsis, acne, psoriasis, transplant rejection, metabolic disorders, infections and AIDS. The polypeptides are also useful for identifying their binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant interleukin-1 inhibitors and polynucleotides encoding the protein useful for treating an IL-1 mediated pathophysiological condition which includes arthritis, rheumatoid arthritis, Crohn's

                             The invention relates to a recombinant polypeptide having interleukin-1 inhibitor (IL-11) activity against IL-1alpha, IL-1beta or both. The IL-11 is useful for preparing pharmaceutical composition for treating an IL-1 mediated pathophysiological condition which includes arthritis, rheumatoid arthritis, Crohn's disease, ulcerative colitis, osteoporosis, juvenile diabetes, psoriasis, lupus erythematosus, fibrosis, glomerulonephritis, gout, acute febrile illness, sarcoidosis, lymphomas, a patient after damage to the brain from vascular occlusion, or acute or chronic interstitial lung disease. The present sequence is an IL-11 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes 7-beta-(4-carboxybutanamido)-cephalosporanic acid acylase (GL-7ACA acylase) which has an amino acid sequence in which part of the N-terminal sequence of natural GL-7ACA acylase is replaced by at least one amino acid sequence selected from AAW34659 to AAW34663. The GL-7ACA acylases of the present invention can be prepared in a large amount and they are useful for the commercial
                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New carboxy:butanamido-cephalosporanic acid acylase - prepd by recombinant DNA methods, used for prepn of 7-amino-cephalosporin
                                                                                                                                                                                                                                                                                                      ;
